

Lindbladian simulation error vs. system size N

$$\rho_0 = |0^N\rangle\langle 0^N|$$

- $\gamma = 0.1, r = 4, \text{slope}=0.924$
- $\gamma = 0.1, r = 6, \text{slope}=0.924$
- $\gamma = 0.1, r = 8, \text{slope}=0.924$
- $\gamma = 0.1, r = 10, \text{slope}=0.924$
- $\gamma = 1.0, r = 4, \text{slope}=0.890$
- $\gamma = 1.0, r = 6, \text{slope}=0.889$
- $\gamma = 1.0, r = 8, \text{slope}=0.889$
- $\gamma = 1.0, r = 10, \text{slope}=0.889$
